## Re Item I Basis of the report

Amended claims 1-7 filed with letter of 16.06.2003 meet the requirements of Art. 34(2)(b) PCT.

#### Re Item V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents:

D1: JOURNAL OF ORGANOMETALLIC CHEMISTRY, vol. 535, 1997, pg. 29-32

D2: US-A-5 276 208 D3: WO-A-00 31091

The present application concerns a process for the racemoselective preparation of silicon-bridged dialkyl-ansa-metallocenes as defined in claim 1 (claims 2-6) and the use of a transitional metal dialkyl compound of formula (III) in the said process (claim 7).

#### 1. Novelty

D1 (see page 29, right-hand column and page 32, paragraph 3.10) discloses the preparation of [Me<sub>2</sub>Si] ansa-zirconocene dimethyl complexes by the reaction between an ansa-ligand (Me<sub>2</sub>Si(Ind)<sub>2</sub>) and pre-dimethylated Me<sub>2</sub>ZrCl<sub>2</sub>. In the said process a diastereomeric mixture is obtained with the ratio rac:meso = 1:2.

D2 (see column 12, lines 39-49) discloses the preparation of rac-dialkyl-metallocenes starting from rac-metallocene dichlorides and lithium alkyl compounds, where the chloride ligands of the transition metal are replaced by the alkyl radicals.

D3 (see examples 3, 6) discloses a process for the racemoselective preparation of halo monoaryloxy metallocenes, characterised in that a transition metal haloaryloxy compound reacts with an ansa-ligand having an alkyl substituent in the 2 position of the indenyl rings. The racemoselectivity is achieved through the use of the transition metal haloaryloxy compound.

In view of documents D1-D3 the subject-matter of claims 1-8 is considered to meet the requirements of Art. 33(2) PCT.

#### 2. Inventive Step

D1 is to be considered as the most relevant prior art.

From D1 the subject-matter of the present application is distinguished by the use of an ansa ligand starting compound having a  $C_1$ - $C_{40}$  substituent in the 2 position of the cyclopentadienyl rings.

With regard to the content of D1 the technical problem to be solved by the present application may be seen as the provision of an alternative process for the racemoselective preparation of silicon-bridged dialkyl-ansa-metallocenes.

This problem has been solved by the process according to claim 1, process in which the racemoselectivity is achieved by the substitution of the ansa ligand in the 2 position of the cyclopentadienyl rings.

Since the solution of the technical problem is not suggested in the prior art, the subject-matter of the present application meet the requirements of Art. 33(3) PCT.

#### Other matters

In claim 4 reference is made to a compound of formula (V), a compound which does not appear anywhere in the description or in the claims. Corrections should be made.
